Lead-to-Deal: Olist Funnel Performance Report

SQL Server and Excel capstone. Olist marketing funnel data: 8,000 leads (June 2017 to May 2018) and 842 closed deals (through November 2018). Prepared by Mohamed Nashat.

Only 10.53% of leads become deals. Channel and landing page quality drive most of the gap, so fixing weak traffic will help more than adding leads. SDR performance cannot be judged yet, because the data has no lost-lead or lead-owner records.

8,000	842	10.53%	14 days
Leads (MQLs)	Closed deals	Conversion rate	Median time to win

Executive summary

Key findings

- **Channels differ about 4 times in conversion.** paid_search converts at 12.30% and organic_search at 11.80%, and these are the two largest channels (1,586 and 2,296 leads). email converts at 3.04% and social, with 1,350 leads, at 5.56%.
- **Landing pages explain a lot.** Of 64 pages with at least 20 leads, three high-traffic pages convert at only 5.45%, 6.77% and 6.97% (310 to 495 leads each), while pages with similar traffic reach 18.75% to 20.30%.
- **Most deals close fast.** The median is 14 days, a third close within a week, and 65% close in under 30 days. The average (48.5 days) is pulled up by a few cycles of up to 427 days.
- **Closing is concentrated.** The top 5 of 22 sales reps closed 49.4% of deals, and the top 5 of 32 SDRs closed 49.9%.
- **The best-converting origin is "unknown" (16.65%, 1,159 leads).** This is more likely a tracking gap than a real channel.

Recommendations

1. Fix or redirect traffic from the three weak high-traffic landing pages to the pages that convert at 19 to 20%.
2. Review the email channel (3.04%) and the "other" origin (2.67%).
3. Fix origin tracking: 14.5% of leads have no recorded channel.
4. Capture lost-lead status, loss reason and the SDR and sales rep on every lead, so SDR qualification can be measured (see section 4).

1. The funnel at a glance

Figure 1. Overview tab of the Excel dashboard (all slicers cleared).

- **8,000 leads became 842 deals (10.53%).** 7,158 leads (89.5%) have no deal.
- **Lead volume grew from 4 in June 2017 to a peak of 1,352 in April 2018.** The first deals appear in December 2017, about six months after the first leads. No new leads appear after May 2018 because the data ends there, not because lead generation fell.
- **Deals spread across 33 segments.** home_decor leads with 106 deals (12.6%), then health_beauty (93) and car_accessories (77). Resellers account for 71% of deals and manufacturers for 29%.
- **Segment and business type exist only for won deals,** so those charts count deals and do not show conversion rates.

2. Channels and landing pages

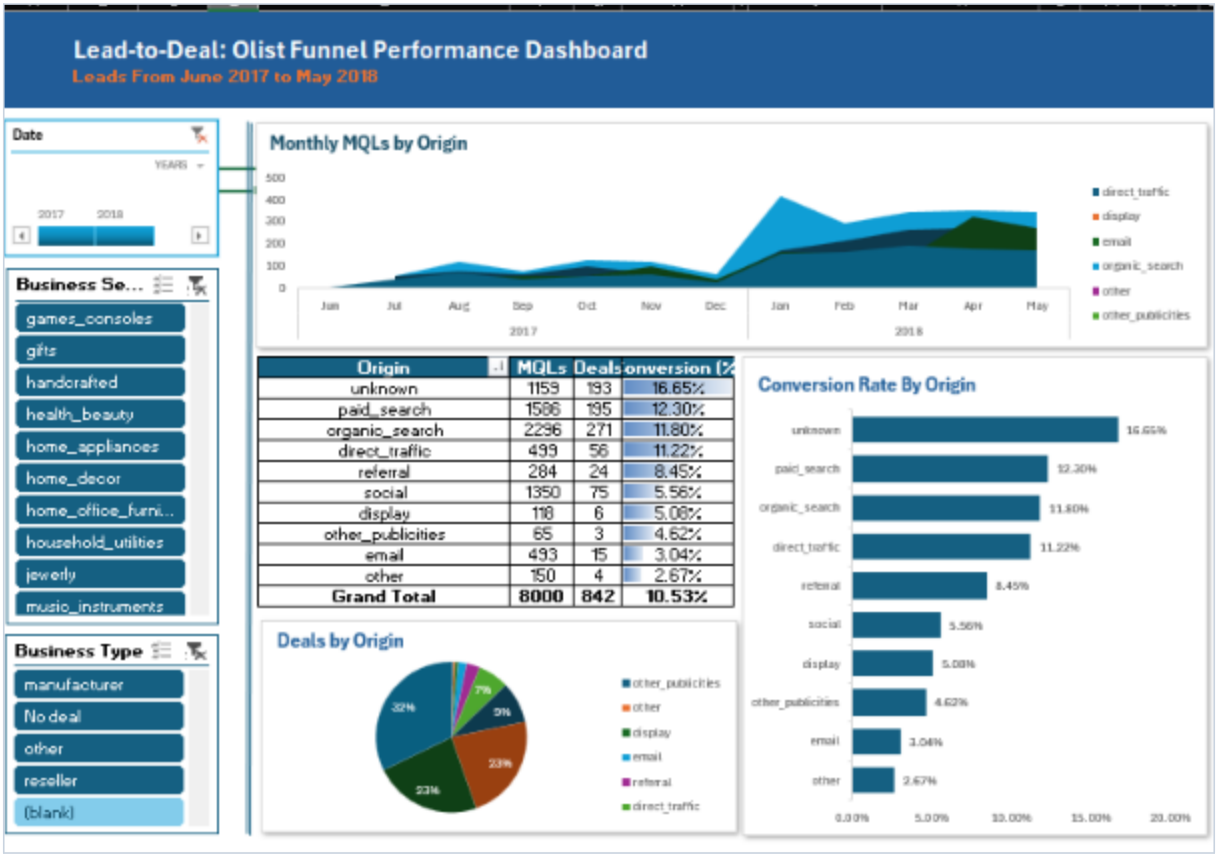

Figure 2. Origin Analysis tab: monthly leads by origin, conversion table and conversion rate by origin.

- **paid_search (12.30%) and organic_search (11.80%) bring the most deals** (195 and 271). direct_traffic converts at 11.22% on 499 leads.
- **email (3.04%), other (2.67%) and social (5.56%) convert worst.** social has 1,350 leads, so even a small improvement there is worth the most.
- **"unknown" origin includes the 60 leads that had no origin recorded.**

Landing pages with at least 20 leads (64 pages)

Landing page (first 6 characters)	Leads	Deals	Conversion	Read
58326e...	495	27	5.45%	Weak, high traffic
88740e...	445	31	6.97%	Weak, high traffic
f017be...	310	21	6.77%	Weak, high traffic
22c298...	883	174	19.71%	Strong
b76ef3...	912	171	18.75%	Strong
40dec9...	330	67	20.30%	Strong

Pages with fewer than 20 leads are excluded, because a handful of leads can produce extreme rates by chance. Source: SQL query on the leads and deals tables.

3. Sales reps and SDRs

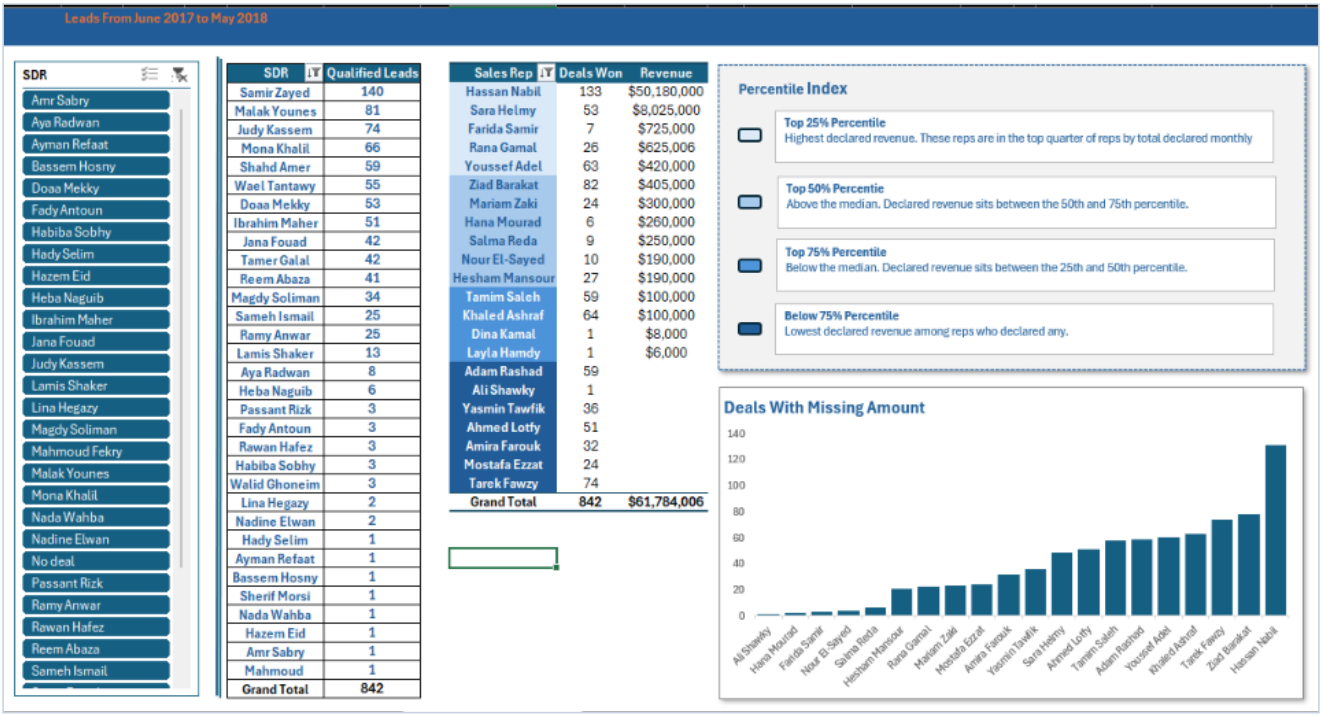

Figure 3. Rep Performance tab. The SDR table counts closed deals per SDR.

- **Closing is concentrated.** The top sales rep closed 133 deals (15.80%) and the top SDR 140 (16.63%). The top 5 reps close 49.4% of deals, and the top 5 SDRs close 49.9%. If a few people left, output could drop sharply.
- **These are volumes, not win rates.** The data shows only closed deals per person, not how many leads each person handled, so it cannot show who is better.
- **Rep and SDR names are fictional placeholders.** The source data is anonymized.
- **The revenue column is indicative only.** Only 45 of 842 deals (5.3%) declared a monthly revenue, and four flagged outliers (6; 500,000; 8,000,000; 50,000,000) make up 58.5 million of the 61.8 million total. The percentile shading therefore reflects who happened to have revenue declared, and volume is the better performance measure.

4. Data quality and limitations

Cleaning steps

Issue found	Action taken
60 leads with no origin	Set to "unknown" (merged with the existing unknown group of 1,099)
business_segment, lead_type, business_type: 1, 6 and 10 empty (under 2%)	Filled with the most common value
lead_behaviour_profile: 177 empty (21%)	Set to "Unknown" (a most-common fill would inflate one profile)
has_company, has_gtin, average_stock, declared_product_catalog_size: about 92% empty	Not loaded and not imputed; too little real data
declared_monthly_revenue: 797 zeros meaning "not declared"	Set to NULL so averages are not distorted
4 revenue outliers (6; 500,000; 8,000,000; 50,000,000)	Kept and flagged (IQR upper limit 302,500, plus a 1,000 floor)
1 deal won 2 days before its first contact date	Kept; excluded from sales-cycle statistics (841 of 842 used)

Limitations

- **No lost or open status.** Only won deals carry attributes. The 7,158 unconverted leads could be lost or still open, so 10.53% is the share of leads that were won, not a win rate.
- **No owner on unconverted leads.** The SDR and sales rep are recorded only for closed deals, so the central job of an SDR, qualifying leads for sales reps, cannot be measured.
- **Uneven time to close.** Leads stop in May 2018 while deals run to November 2018, so later leads had less time to convert.

Data request

- The SDR and sales rep assigned to every lead, not only won ones.
- A lead status (open, won, lost) and a loss reason.
- A qualification date (MQL to SQL), to measure SDR performance and speed.
- Origin tracking for the 1,159 leads currently recorded as "unknown".

With those fields, the next analysis can report conversion by SDR, time to qualify, and why leads are lost.
